

# Veil (MVP)

**Vision:** To become Argentina's definitive source of truth for salaries and workplace culture by providing professional transparency in a high-inflation environment.

---

## 1. Unique Value Proposition (UVP)

**"Verified professional anonymity with a real-time purchasing power engine."**

Unlike global platforms, **Veil** is built specifically for the Argentine context. Glassdoor lacks local economic scope, LinkedIn incentivizes performative positivity, and Reddit lacks anonymity. Veil provides the inflation-adjusted data workers need to negotiate effectively, accessible only to verified professionals. The social network proposal is very similar to Blind.

---

## 2. Core User Stories

### A. Identity & Trust ("The Veil")

- **Sign Up / Login:** As a user, I can create an account via email/password or Google OAuth to maintain a persistent credential and access my history.
- **Work Email Verification:** As a user, I must verify a current work email (e.g., [@globant.com](mailto:@globant.com)) to prove my employment. The system sends a one-time code and, upon confirmation, persists only the company domain as a badge on my profile. **The full email is discarded immediately after verification.**
- **Job Change / Re-verification:** As a user, I can update my work email when I change jobs. My previous salary entries remain tagged to the former company, preserving historical data while updating my current "Company Badge."

### B. The Inflation Engine (Core Differentiator)

- **Salary Input:** As a user, I can log my net monthly salary (ARS), the month/year of payment, my role, and my seniority level.
- **Real-Wage Visualization:** I can view my salary history converted to **USD Blue** and adjusted by **IPC (Consumer Price Index)** to track purchasing power fluctuations month-over-month.
- **Market Benchmark:** I can compare my adjusted salary against the market average. To protect anonymity, benchmark data is only visible once a cohort (role + seniority + company size) reaches a minimum of **3 entries (k-anonymity)**.

### C. The Grapevine (Company Feed) — Phase 1.1

- **Company Wall:** Verified users can post anonymous "insider" info (bonuses, culture, tech stack) on a company-specific feed.
- **Upvote/Downvote:** Users can vote on posts to surface relevant signals and bury noise.

- *Note: This feature is scoped for a fast-follow launch to avoid the legal and moderation complexities of content during the initial data-validation phase.*
- 

### 3. Technical Specifications

| Area                       | Detail                                                                                                                                        |
|----------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Authentication</b>      | Email + Password or Google OAuth (Standard session management).                                                                               |
| <b>Verification</b>        | One-time code via work email; only the domain is persisted.                                                                                   |
| <b>Privacy Model</b>       | <b>Architectural Separation:</b> Auth credentials and activity data (posts, salaries) reside in separate schemas with no direct foreign keys. |
| <b>Anonymity Threshold</b> | Minimum of 3 entries per cohort required before displaying benchmark data.                                                                    |
| <b>Data Sources</b>        | <b>IPC:</b> INDEC (via third-party aggregators). <b>USD Blue:</b> Dolarito / Ámbito APIs.                                                     |
| <b>Frontend</b>            | Mobile-first Responsive Web (PWA).                                                                                                            |
| <b>Backend</b>             | PostgreSQL (TimescaleDB extension for time-series salary data).                                                                               |

---

### 4. Scope Management

#### Out of Scope (Not for MVP)

- Direct Messaging (1-to-1).
- Document uploading (e.g., PDF payslips).

- Public user profiles or bios.
  - Global market support (Exclusively Argentina).
  - Social Feed / Grapevine (Deferred to Phase 1.1).
- 

## 5. Success Metrics (KPIs)

| KPI               | Target                                                                            |
|-------------------|-----------------------------------------------------------------------------------|
| Trust             | 100 verified users from at least 10 Tier-1 companies (Meli, Globant, JPMC, etc.). |
| Density           | At least 5 active salary entries per major job title (e.g., "Sr. Backend Dev").   |
| Contribution Rate | 40%+ of verified users submit at least one salary entry within their first week.  |
| Retention         | 30% of users return the day monthly IPC data is released.                         |

---

## 6. Go-to-Market (GTM) Strategy

To solve the "Cold-Start" problem (users needing data to contribute data):

1. **Seed with Public Data:** Pre-populate the platform with aggregated salary ranges from Sysarmy's annual survey and Openqube to provide immediate initial value.
2. **Community-First Launch:** Target the Sysarmy Slack/Discord and Argentine tech Twitter communities as the primary distribution channels.
3. **Standalone Hook:** Market the IPC/Blue salary calculator as a free utility. Use the traffic from the calculator to convert visitors into verified contributors.
